

Safil Yarns for functional fabrics with a twist on fashion

Safil, Italian spinning company based in Biella, has expanded its range of performing yarns for functional garments. These are made of innovative blends of natural and technical fibres and of some exclusive blends.

The concept is the result of developments in yarn with a high level of personality and technical properties. A company spokesperson says that its yarn can be a source of inspiration for fashion designers, who are called to use functional fabrics to create garments for the needs of increasingly active and demanding consumers.

As the border between fashion, urban, active, and sportswear are not precise, contemporary yarns can contribute to create clothing with multifunctional characteristics, suitable for different uses, as well as garments with precise technical standards.

Safil offers with its yarns with added value in terms of sustainability and comfort.

Sustainability: Safil is the first spinner in Italy to become bluesign® system partner.

Safil yarns are produced respecting the bluesign® system, in order to reduce the impact on people and environment, to ensure responsible use of resources, and to guarantee the highest level of consumer safety. Safil also encourages its suppliers to increase their efforts toward better sustainability.

Comfort: Safil is the first worsted spinning company in Europe to adopt the Wool ComfortMeter™, a Total Quality System that removes the guess work from the garment developing process and offers scientifically proven next-to-skin wool garments based on their next-to-skin comfort. 'It helps to avoid lack of comfort and itchy effects occurring when the ends of wool fibres push against the wearer's skin, especially in outdoor garments' says a Safil spokesperson.
